Molten Filling Machines are used for products such as wax, candles, glue and other products that must be filled while hot. Many times, the heating process will thin very thick products, or even liquefy solid products, so that they will flow through a filling machine. However, usually these product must not only be kept hot, but they must also be kept at a consistent temperature throughout the fill process, as changes in viscosity can lead to inconsistent and unreliable fill levels, plugged product pathways and other packaging machine issues.
