The molten salt regulating valve is a control valve used in the molten salt system. Its main function is to adjust the molten salt flow and pressure to ensure the stable operation of the system. The valve accurately controls the flow of molten salt by adjusting the valve opening to achieve temperature and flow regulation. Molten salt regulating valves are usually resistant to high temperatures, corrosion, and have good sealing properties. They are widely used in high-temperature energy systems such as molten salt energy storage and solar thermal power generation to ensure the efficient and safe operation of the molten salt circulation system.
