The global Molybdenum Dibutyl Dithiocarbamate market size is predicted to grow from US\$ 390 million in 2025 to US\$ 514 million in 2032; it is expected to grow at a CAGR of 4.0% from 2026 to 2032.

Molybdenum dibutyldithiocarbamate (MoDTC) is a highly efficient and environmentally friendly organic molybdenum friction modifier and extreme pressure anti-wear additive. It is widely used in lubricating oils and greases, forming a low-friction protective film on metal surfaces, significantly reducing friction, wear, corrosion, and oxidation. It is commonly used in internal combustion engine oils, gear oils, and industrial greases to improve energy efficiency.

The core upstream raw materials include molybdenum trioxide or sodium molybdate, dibutylamine, and carbon disulfide. Among these, the price fluctuation of molybdenum concentrate directly determines the base cost of MoDTC, while the purity of dibutylamine affects the oil solubility and color of the final product.

Global sales volume in 2025 is estimated at 29,100 tons, with a market price of \$13,700 per ton. The industry's gross profit margin is between 25% and 35%.
