Abstracts

The global Molybdenum Niobium (MoNb) Sputtering Targets market size is predicted to grow from US$ 298 million in 2025 to US$ 440 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

Molybdenum-Niobium sputtering targets (MoNb targets) are alloy targets made primarily of molybdenum and niobium. They are typically manufactured using powder metallurgy, sintering, hot working, and precision machining processes. Primarily used in PVD and magnetron sputtering, they deposit MoNb alloy thin films on substrate surfaces to achieve excellent conductivity, heat resistance, corrosion resistance, and film stability.

Upstream suppliers mainly include those providing high-purity molybdenum powder, high-purity niobium powder, alloy raw materials, target blanks, backplane materials, and powder metallurgy consumables. Downstream suppliers primarily target flat panel displays, semiconductors, thin-film electronics, photovoltaic devices, optical coatings, and other advanced electronic material applications.

The global average price of molybdenum-niobium sputtering targets is approximately US$210/kg, with sales volume around 1450 tons and an industry profit margin of 30%.

The global molybdenum-niobium sputtering target market will continue to develop towards higher purity, higher density, finer grains, larger sizes, and lower defects. With the increasing demands on the performance of conductive layers, barrier layers, and functional thin films from high-resolution displays, OLEDs, advanced semiconductors, and thin-film electronics, the application space for MoNb alloy sputtering targets is expected to expand. Manufacturers will place greater emphasis on Mo/Nb compositional uniformity, impurity control, grain structure, sintering density, and batch

stability to reduce particle defects, abnormal discharges, and film defects. Simultaneously, large-size substrates and high-end coating equipment will drive the upgrading of sputtering targets towards tighter dimensional tolerances, higher utilization rates, and customized alloy ratios.
