The global Molybdenum Products market size is predicted to grow from US\$ 15079 million in 2025 to US\$ 23586 million in 2032; it is expected to grow at a CAGR of 6.8% from 2026 to 2032.

Molybdenum products generally refer to a series of metallurgical intermediates and metal products made from metallic molybdenum and its alloys through smelting, powder metallurgy, and precision machining. As a typical refractory metal, molybdenum possesses an extremely high melting point, excellent high-temperature creep strength, a low coefficient of thermal expansion, and good thermal conductivity, making it widely used in critical components operating under high-temperature, highly corrosive, and high-load conditions. The metals and products section covers bars, plates, strips, foils, wires, as well as semi-finished and deeply processed parts such as high-temperature furnace components, crucibles, and sputtering targets.

In 2025, global Molybdenum Products sale reached approximately 304 K Tons, with an average global market price of around 50,706 US\$/Ton. Production capacity reached 400 K Tons, with a gross profit margin of approximately 20%.

Steel and machinery manufacturing remain fundamental pillars. Molymet points out that molybdenum significantly improves heat and corrosion resistance in specialty steels and stainless steels, extending the lifespan of engineering machinery and energy equipment. Jinduicheng Molybdenum also considers steel metallurgy and machinery manufacturing as major downstream industries. The chemical and energy sectors steadily drive demand for molybdenum chemicals through catalysts and lubrication systems. Molymet's German operations use molybdenum oxide as a core raw material for oil refining catalysts and are expanding into areas such as ceramic pigments.

Molybdenum disulfide has long been used as a high-temperature lubricant. The electronics, semiconductor, and high-end manufacturing sectors are forming a faster-growing cluster of high-purity molybdenum applications. H.C. Starck's molybdenum and molybdenum-tungsten sputtering targets are widely used in flat panel displays and touch-sensing thin film preparation. Plansee and A.L.M.T. provide molybdenum thermal field components and crucibles used in sapphire and specialty glass melting. Top Seiko and Midwest Tungsten, through their precision machining capabilities of difficult-to-machine and refractory metals, provide customized parts for semiconductor equipment, vacuum coating, and advanced scientific research.
