A monitoring buoy, also known as an oceanographic buoy or data buoy, is a specialized floating platform or buoyant structure equipped with various sensors and instruments designed to collect environmental data from the ocean, lakes, or other bodies of water. These buoys are typically anchored in place, and they serve as critical tools for monitoring and studying various oceanographic and environmental parameters. Monitoring buoys are widely used in scientific research, environmental monitoring, weather forecasting, and oceanographic studies.

The integration of increasingly sophisticated sensors continues to be a significant trend. Monitoring buoys are equipped with a broader array of sensors to measure a wider range of oceanographic and environmental parameters. These sensors provide more comprehensive and detailed data for research and monitoring.
