The global Monitoring Unmanned Surface Vessel market size is predicted to grow from US\$ 216 million in 2025 to US\$ 558 million in 2032; it is expected to grow at a CAGR of 15.2% from 2026 to 2032.

In 2025, global production of monitoring unmanned surface vessels reached 1,260 units, with an estimated average selling price of US\$175,000 per vessel. Monitoring unmanned surface vessels are unmanned surface platforms equipped with water quality, meteorological, hydrological, acoustic, video, radar, or other environmental sensing payloads. They perform data collection, inspection, monitoring, early warning, and patrol tasks in rivers, lakes, reservoirs, ports, nearshore or open ocean waters. They typically consist of a hull, propulsion system, battery/hybrid power system, GNSS/IMU positioning system, communication link, automatic navigation control system, mission payload, data acquisition software, and shore-based control platform. They can complete tasks such as water quality monitoring, river and lake patrol, marine environmental observation, port inspection, algal bloom early warning, pollution source tracing, and pipeline/bridge/dock inspection through remote control, preset routes, semi-autonomous, or fully autonomous methods. The upstream sector includes composite material hulls, motors, propulsion systems, batteries, GNSS/IMUs, communication modules, water quality sensors, sonar, cameras, and data acquisition software. The midstream sector includes hull manufacturing, automated navigation systems, payload integration, shore-based platforms, and sea trials. Downstream customers include environmental protection departments, water conservancy and hydrology agencies, water utilities, ports and terminals, marine research institutes, energy and marine engineering companies, and surveying service providers. Gross profit margins range from approximately 20% to 35%.
