The global Mono-Material Trays market size is predicted to grow from US\$ 767 million in 2025 to US\$ 1077 million in 2031; it is expected to grow at a CAGR of 5.8% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The mono-material trays are one the most trending topics in today's packaging industry, fulfilling the demand for super lightweight trays for food packaging. The mono-material trays are made of polypropylene, which is very easy to seal and very robust. On the other hand, mono-material trays also provide heat-resistant ability which make them suitable for hot filling and microwave use. When we refer to "mono plastic" in the context of plastic packaging, we mean the use of just one type of material for the whole pack. Traditionally, trays used by the food industry would be a combination of materials, such as PET, PP, PVC or similar and PE. PET being used for the body of the tray, with a laminated PE base film being used to bond the packaging together. To separate a PET tray laminated with a PE layer is a long and costly chemical process. Using a mono plastic solution - for example, a tray made entirely from PET that can be sealed without the need for a sealant layer - means the product is 100% recyclable.

The food market includes both fresh and processed foods. According to our research, the global food and beverage market has a sales revenue of approximately US\$10 trillion. China is the world's number one food and beverage market and the world's number one food and beverage producer. In the market drivers section, the total consumer spending forecast shows that consumption at home is growing faster than consumption away from home. However, food service continues to become increasingly important due to changing lifestyles. In addition, the rise of private label brands is

putting pressure on the margins of brand manufacturers as retailers compete for a higher share of product sales.
