Monobutyltin Triisooctanoate (MTTO) is a highly efficient, hydrolysis-resistant organotin compound, appearing as a pale yellow, transparent, oily liquid at room temperature. It is primarily used as a highly efficient catalyst in esterification and polycondensation reactions, and also as a heat stabilizer for polyurethane and PVC. It is characterized by low catalytic dosage and the elimination of the need for neutralization and washing.

The product's cost profile is based on the midstream synthesis and refining process, which produces high-purity MTTO through esterification or condensation reactions. Global sales in 2025 are estimated at approximately 1800 tons, with an average selling price of US\$19.05 per kilogram. The industry's gross profit margin is around 15%-20%.
