Antibody, also called immunoglobulin, a protective protein produced by the immune system in response to the presence of a foreign substance, called an antigen. Antibodies recognize and latch onto antigens in order to remove them from the body. A wide range of substances are regarded by the body as antigens, including disease-causing organisms and toxic materials such as insect venom.

Treatment that uses antibodies to help the body fight cancer, infection, or other diseases. Antibodies are proteins made by the immune system that bind to specific markers on cells or tissues. IgG1 antibodies are a type of antibody made in the laboratory that can be used in diagnosis or treatment. In cancer treatment, IgG1 antibodies may kill cancer cells directly, they may block development of tumor blood
