TSLP (thymic stromal lymphopoietin) is considered to be a central regulator of Th2 cell-mediated asthma inflammation and plays a key role in the occurrence and persistence of airway inflammation. TSLP can drive the release of downstream type 2 cytokines, leading to inflammation and asthma symptoms. However, in addition to asthma, TSLP is closely related to the onset of a variety of autoimmune diseases and chronic inflammatory diseases. Therefore, TSLP antibody drugs have broad market application prospects and are expected to become one of the important targets in the field of autoimmune diseases.
