Monocrystalline Bifacial Double Glass Solar Panel refers to a type of solar panel that uses monocrystalline silicon cells with bifacial design, which can capture sunlight from both sides of the panel. The panel is covered on both sides with tempered glass, which

provides excellent protection against environmental factors such as hail, wind, and snow, while also allowing for higher light transmission. The double glass design also enhances the durability and lifespan of the panel. The front and back sides of the panel can generate electricity independently, making it more efficient and versatile in various applications, including residential and commercial projects, as well as utility-scale solar power plants.
