Monocrystalline PERC (Passivated Emitter and Rear Cell) Double Glass Half Cell Solar Panel is a type of solar panel used for converting solar energy into electricity. This solar

panel comprises monocrystalline silicon-based cells, which are more efficient and durable than polycrystalline-based cells. The use of PERC technology further enhances the efficiency of the panel by increasing the amount of light captured and converted into electricity.

The double glass design of this solar panel makes it more robust and reliable, as it offers enhanced protection against external factors like weather, temperature changes, and potential damage from environmental impact. In addition, the half-cell design helps reduce power loss and increases the overall performance of the panel even when partially shaded.

Overall, these features make Monocrystalline PERC Double Glass Half Cell Solar Panel a popular choice for residential and commercial solar installations, offering high efficiency, durability, and reliability.
