CH₃F is a specialty gas used in the manufacturing process of semiconductor chips for micromachining nitride film by etching. CH₃F is mainly used in the manufacture of semiconductor memory chips including NAND flash and DRAM that requires micromachining technology. Since its etching selectivity is higher than those of other gases, CH₃F is suitable for micromachining of multi-layer structure of 3D NAND flash. The demand for CH₃F has been increasing these days due to start-up of many lines to manufacture 3D NAND flash.
