The global Monomethylamine Anhydrous market size is predicted to grow from US\$ 641 million in 2025 to US\$ 879 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

Monomethylamine Anhydrous refers to methylamine products that do not contain moisture or have extremely low moisture content, and is an important basic organic amine chemical raw material. Its chemical properties are active, usually stored and transported in gas or liquefied form, with high purity and stability. It is widely used in fields such as pesticides, pharmaceutical intermediates, rubber additives, surfactants, and electronic chemicals. In industry, high-purity anhydrous products are mainly prepared by reacting methanol with ammonia, and then subjected to distillation and dehydration treatment. It is one of the important basic chemicals in the organic amine industry chain. In 2025, global Monomethylamine Anhydrous production reached approximately 846 K MT, with an average global market price of around US\$ 774 per ton.

The annual production capacity of anhydrous methylamine is 1200 thousand tons, with a gross profit margin of about 25%.

Upstream: The main raw materials for anhydrous methylamine are methanol and ammonia, with methanol coming from the coal to methanol or natural gas to methanol industry chain, and ammonia mainly coming from synthetic ammonia plants.

Downstream: mainly used in pesticide intermediates, pharmaceutical intermediates, rubber additives, surfactants, dyes, and electronic chemicals, among which pesticides and pharmaceuticals are the main sources of demand. In addition, their applications in

fine chemicals and new materials are gradually expanding.

Raw material costs account for approximately 65% to 75%, energy and utility costs account for approximately 10% to 15%, manufacturing and equipment depreciation costs account for approximately 5% to 10%, and logistics and storage costs account for approximately 5% to 8%.
