## Abstracts

The global Monomethylamine Aqueous Solution market size is predicted to grow from US\$ 296 million in 2025 to US\$ 411 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

Monomethylamine aqueous solution refers to a liquid product formed by dissolving methylamine gas in water, and is one of the most common forms of methylamine products. This product has strong alkalinity and good reactivity, and its storage and transportation safety is higher than that of anhydrous methylamine, so it is widely used in industry. Industrial production usually involves the reaction of methanol and ammonia to produce a mixture of methylamine, which is then separated and absorbed into water to obtain aqueous solutions of varying concentrations of methylamine. These solutions are mainly used in industries such as pesticide intermediates, pharmaceutical intermediates, rubber auxiliaries, dyes, and surfactants. In 2025, global Monomethylamine Aqueous Solution production reached approximately 1,065 K MT, with an average global market price of around US\$ 284 per ton.

The annual production capacity of methylamine aqueous solution is 1500 thousand tons, with a gross profit margin of 20%.

Upstream: The main raw materials are methanol and ammonia

Downstream: mainly used in industries such as pesticide intermediates, pharmaceutical intermediates, surfactants, and fine chemicals, with pesticides and pharmaceuticals being the main sources of demand.
