The global Monoperoxyphthalic Acid market size is predicted to grow from US\$ 268 million in 2025 to US\$ 390 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Monoperoxyphthalic Acid (MPPA) is an aromatic peroxydicarboxylic acid derived from phthalic acid, characterized by a highly reactive peroxide ($-O-O-$) functional group, making it a strong oxidizing agent widely used in organic synthesis, fine chemicals, and specialty bleaching applications. Its supply chain begins with upstream petrochemical intermediates such as phthalic anhydride (produced from o-xylene or naphthalene oxidation) and hydrogen peroxide, which are reacted under controlled, low-temperature conditions to form MPPA through peroxidation processes. The midstream stage involves stabilization, purification, and formulation (often in diluted or stabilized solutions due to its thermal sensitivity and potential explosiveness), typically handled by specialty chemical manufacturers with expertise in peroxides. Downstream, MPPA is supplied to pharmaceutical intermediates producers, polymer and epoxy processing industries, and laboratory reagent distributors, where it is used for epoxidation, Baeyer-Villiger oxidation, and selective oxidation reactions. The supply chain requires strict safety, cold-chain logistics, and regulatory compliance due to the compound's hazardous and unstable nature. In 2025, global Monoperoxyphthalic Acid output was about 160,000 tons with 200,000 tons of capacity, average prices of USD 1,500-3,500 per ton, and gross margins around 22%.
