The monorail system is a transportation system commonly referred as a beam way for an elevated system, supported along a single rail. A monorail is a railway that uses a single elevated rail track and acts as a mode of rapid mass transport (MRT). It uses equipment and infrastructure, which is less massive than heavy rail modes, such as commuter and metro rail systems or subways.

Monorail systems is a single rail track service for passengers. The main key drivers for the growth of the monorail systems are urbanization and increased demand for cost effective & efficient transportation for public services. Straddle monorail by monorail type is estimated to acquire largest share in the global monorail systems market. As straddle monorail system are easy to install without having spent on expensive track-
