The global Monosodium Citrate market size is predicted to grow from US\$ 299 million in 2025 to US\$ 423 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

Monosodium Citrate is a sodium salt derived from citric acid in which one hydrogen ion is neutralized by sodium, producing a mildly acidic citrate compound widely used as an acidity regulator, buffering agent, chelating agent, and mineral supplement ingredient in food, pharmaceuticals, personal care products, and industrial formulations. The supply chain begins with upstream raw materials including sugar, corn starch, cassava starch, or molasses, which are fermented by microorganisms such as *Aspergillus niger* to produce citric acid, along with sodium sources such as sodium hydroxide, sodium carbonate, or sodium bicarbonate. Midstream manufacturing involves controlled neutralization of citric acid to achieve the monosodium citrate form, followed by purification, crystallization, drying, milling, quality testing, and packaging. Downstream, monosodium citrate is supplied to food and beverage manufacturers for pH adjustment and flavor enhancement, pharmaceutical companies for oral solutions and effervescent formulations, personal care producers for buffering systems, and industrial users for specialty chemical formulations, water treatment chemicals, and metal processing applications. The market is closely linked to citric acid production capacity, agricultural feedstock availability, food additive regulations, and demand from the pharmaceutical and processed food industries. In 2025, global Monosodium Citrate output was about 220,000 tons with 260,000 tons of capacity, average prices of USD 1,200-2,600 per ton, and gross margins around 24%.
