The global Montanic Acid market size is predicted to grow from US\$ 72.4 million in 2025 to US\$ 87.6 million in 2031; it is expected to grow at a CAGR of 3.2% from 2025 to 2031.

Montanic acid is a saturated fatty acid isolated and detected mainly in montan wax. It also occurs in beeswax and Chinese wax. Montanic acid ethylene glycol esters and glycerol esters are used as protective layer on fruit skins and coating on foods. It is known as E number reference E912.

Fatty acids are a class of compounds composed of three elements: carbon, hydrogen and oxygen, and are the main components of neutral fats, phospholipids and glycolipids. According to the different lengths of carbon chains, fatty acids can be divided into three major categories: short-chain fatty acids, medium-chain fatty acids, and long-chain fatty acids. As an important chemical raw material, fatty acids are widely used in the fields of food, medicine, cosmetics, detergents, and rubber. Globally, the fatty acid consumption market is mainly concentrated in the Asia-Pacific region as well as Europe, of which the Asia-Pacific region is the largest fatty acid consumption market in the world, accounting for about 45% of the global fatty acid consumption market. According to the different degree of carbon chain saturation, fatty acids can be divided into saturated fatty acids, unsaturated fatty acids and trans fatty acids, of which saturated fatty acids are the mainstream of the fatty acid market, accounting for more than 70% of the global fatty acid market. As the function of unsaturated fatty acids is deeply explored, and the saturated fatty acid market is gradually saturated, unsaturated fatty acids are expected to become an important driving force for the growth of the fatty acid market in the future.
