Mortgage and Loan Lifecycle Software is enterprise software used by banks, mortgage lenders, and non bank lenders to run the end to end loan lifecycle under a consistent data model and configurable workflows, spanning application intake, document capture, credit and fraud checks, underwriting and interest rate pricing, contract generation and e signature, funding and reconciliation, and ongoing servicing such as accruals, billing, repayment schedules, delinquency monitoring, collections and recovery, plus regulatory reporting and audit trails. It is typically delivered as an operations console with borrower and partner portals and an integration layer, designed to improve compliance and traceability, enable explainable risk controls, automate operational steps, and connect external services.
