The global Mosunetuzumab market size is predicted to grow from US\$ 93.91 million in 2025 to US\$ 233 million in 2032; it is expected to grow at a CAGR of 8.0% from 2026 to 2032.

In 2025, global Mosunetuzumab production reached approximately 3,200 units. Mosunetuzumab is a fully human IgG1 subtype CD20/CD3 bispecific monoclonal antibody that mainly targets the CD20 antigen on the surface of B lymphocytes and the CD3 receptor on the surface of T lymphocytes. It bridges tumor B cells and cytotoxic T cells to activate T cell-mediated immune killing, thereby specifically eliminating malignant B cells. Administered via intravenous injection, this drug is mainly indicated for the treatment of B-cell non-Hodgkin lymphomas such as relapsed or refractory follicular lymphoma. As a tumor immunotherapeutic agent, it features high targeting specificity and distinct antitumor activity.

Mosunetuzumab, as the world's first CD20/CD3 bispecific antibody approved for relapsed or refractory follicular lymphoma, has established a core position in the later-line treatment of indolent lymphomas by virtue of its innovative T-cell bridging mechanism, high remission rate and favorable safety profile. Its 'off-the-shelf' nature significantly improves treatment accessibility and avoids the individualized preparation cycle required for CAR-T therapies. With the approval of the subcutaneous formulation, administration convenience has been greatly enhanced, further promoting the popularization of its clinical application. In the market, the drug has been included in authoritative clinical guidelines both at home and abroad, with its indications continuously expanding to front-line settings and combination regimens under active exploration. In the global competitive landscape, it forms differentiated complementation with similar bispecific antibodies, ADCs and CAR-T products, occupying a stable market share thanks to its structural advantages and long-term therapeutic benefits. As a key focus of global layout, the Chinese market is expected to witness continuous

improvement in accessibility and remarkable growth potential with domestic approval and potential insurance coverage. Overall, mosunetuzumab is reshaping the treatment landscape of follicular lymphoma and is expected to move from later-line to front-line therapy in the future, becoming a key regimen contributing to functional cure.
