Abstracts

The global MoTi (Molybdenum-Titanium) Alloy Thin Films market size is predicted to grow from US$ 120 million in 2025 to US$ 188 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

Molybdenum-titanium (MoTi) alloy thin films are functional metal films composed of molybdenum (Mo) and titanium (Ti), formed through processes such as magnetron sputtering and physical vapor deposition. This material possesses excellent conductivity, corrosion resistance, thermal stability, and interfacial adhesion properties, and is commonly used as electrode layers, barrier layers, and interconnect layers in semiconductors, display panels, thin-film transistors, advanced packaging, and electronic devices.

Upstream industries mainly include high-purity molybdenum, high-purity titanium, MoTi alloy targets, sputtering gases, and related materials for vacuum equipment; downstream applications primarily include semiconductor wafer manufacturing, TFT-LCD/OLED display panels, touch devices, advanced packaging, power devices, and other microelectronic and optoelectronic product manufacturing.

The global average price of molybdenum-titanium (MoTi) alloy thin films is approximately US$180/kg, with sales volume of approximately 550-800 tons and an industry profit margin of 29%.

The global molybdenum-titanium alloy thin film market will benefit from the continued development of advanced semiconductor processes, display panel upgrades, advanced packaging, and the power electronics industry. As devices evolve towards smaller linewidths, higher integration, and greater reliability, higher demands are placed on thin

film materials for compositional uniformity, low resistivity, thermal stability, interfacial adhesion, and impurity control. High-purity MoTi targets, low-defect sputtering processes, and large-size substrate deposition technologies will become the main technological directions. Meanwhile, the expansion of applications such as OLEDs, Micro LEDs, advanced packaging, and novel power devices will further increase the application scenarios for MoTi thin films. Future competition among manufacturers will focus more on high-purity material preparation, alloy composition control, thin film uniformity, and customer-customized process capabilities.
