A motion controller contains motion profiles and target positions and it creates trajectories for motors and/or actuators. Motion control drives are an integral part of motion controllers. They are mostly used for process automation in various end-use industries such as electronics and assembly, robotics, semiconductors, and food & beverages among others.

In terms of type of axis, multi axis drives are projected to be highly preferred. Rapid developments in technology have led to increased demand for multi axis drives in high-performance automation and robotic applications. As a result, motion control drive manufacturers have been developing new products and systems that can adapt to their varying demands, thus offering numerous opportunities to multi axis drives.
