The global Motion Programmable Automation Controller (MPAC) market size is predicted to grow from US$ 1825 million in 2025 to US$ 3473 million in 2032; it is expected to grow at a CAGR of 9.8% from 2026 to 2032.

The Motion Programmable Automation Controller (MPAC) market is a specialized segment within the industrial automation industry. MPACs are advanced control systems that integrate motion control capabilities with programmable logic controller (PLC) functionality. They are used in various industries, including manufacturing, robotics, packaging, automotive, and more, to automate complex motion control processes.

The market for MPACs has been witnessing significant growth due to several factors. One of the key drivers is the increasing demand for precise and efficient motion control solutions across industries. MPACs offer advanced features such as multiple axis control, high-speed performance, synchronization, trajectory planning, and real-time monitoring, which enable complex motion control tasks to be executed accurately and efficiently.

Moreover, the integration of PLC functionality in MPACs provides additional benefits. It allows for seamless communication and coordination between motion control and other automation processes, enhancing overall system efficiency and productivity. MPACs offer a centralized control platform, simplifying programming, diagnostics, and maintenance, and reducing the need for separate controllers for motion and logic control.

Another factor contributing to the growth of the MPAC market is the increasing adoption

of robotics and automation in various industries. As industries strive to improve production efficiency, reduce manual labor, and enhance product quality, the demand for advanced motion control solutions, such as MPACs, continues to rise. These controllers facilitate the precise movement and synchronization of robotic arms, conveyors, linear actuators, and other automated equipment.

Technological advancements have also played a crucial role in driving the MPAC market. The development of faster processors, improved communication protocols, and software advancements have enabled MPACs to handle complex motion control tasks more effectively. Additionally, the integration of safety features, such as safe torque off (STO) and safe motion functions, ensures the protection of personnel and equipment during operation.
