The global Motor Control System-on-chip (SoC) market size is predicted to grow from US$ 340 million in 2025 to US$ 484 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

The motor control system chip (SoC) is an electronic device that integrates multiple functional modules into a single chip, specifically designed to control the operation of motors. These functional modules typically include microprocessors, digital signal processors (DSPs), analog signal processing modules, control algorithms, and communication interfaces. SoC can significantly contribute to space-saving, cost reduction, and efficiency enhancement through its highly integrated features.

The upstream raw materials for motor control system chips include semiconductor materials, packaging materials, and semiconductor manufacturing equipment. The downstream applications primarily encompass industrial automation equipment, automotive systems, and renewable energy control systems. The current average market price is approximately $2 per unit.

As a core component of modern motor control, motor control system chips are in a rapidly developing and highly competitive market. By replacing traditional motor control technologies, these chips have significantly enhanced performance and cost-effectiveness in modern industries.

United States market for Motor Control System-on-chip (SoC) is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
