The global Motor Drive ICs market size is predicted to grow from US\$ 4626 million in 2025 to US\$ 5833 million in 2031; it is expected to grow at a CAGR of 3.9% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Motor Driver ICs are current amplifiers and are an essential component of motor interfacing. The motor driver integrated circuit chip acts as the interface between a microprocessor or microcontroller, and a motor. As microprocessors tend to operate at lower currents, and motors at higher, motor driver ICs are needed to supply current to the motor as needed. As different motors have different signal requirements, a motor driver IC is usually specific to a motor type. It offers motor drivers for brushless DC motors (BLDC,) brushed DC motors, and stepper motors.

Global motor driver IC key players include Texas Instruments, STMicroelectronics, ON Semiconductor, etc. The top three manufacturers hold a share about 31%. The global motor driver IC are mainly produced in United States and Europe, they occupied for a share over 40%. Asia-Pacific is the largest market, with a share about 46%, followed by North America and Europe with the share about 24% and 22%.
