Motor Driven Pelleting Mill refers to a granulator driven by an electric motor. Motor Driven Pelleting Mills are mainly composed of feeding, stirring, granulating, transmission and lubrication systems. They can be divided into feed granulators and biomass energy granulators. They are widely used in the pharmaceutical, chemical and food industries. The working process is that the mixed powder with a moisture content of no more than 15% enters the feeding auger from the hopper. By adjusting the speed of the stepless speed regulating motor, a suitable material flow rate is obtained, and then enters the agitator, where it is stirred and mixed with steam through the stirring rod. Mix and temper, then pass through the chute and optional iron suction device to remove iron impurities mixed in the powder, and finally enter the pressing chamber for granulation.

The global Motor Driven Pelleting Mill market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
