The global Motor Grader market size is predicted to grow from US\$ 1259 million in 2025 to US\$ 2463 million in 2031; it is expected to grow at a CAGR of 11.8% from 2025 to 2031.

Motor grader, is a construction machine with a long blade used to create a flat surface during the grading process. Typical models have three axles, with the engine and cab situated above the rear axles at one end of the vehicle and a third axle at the front end of the vehicle, with the blade in between. Certain graders can operate multiple attachments, or be used for separate tasks like underground mining.

Motor graders are commonly used in the construction and maintenance of dirt roads and gravel roads. In the construction of paved roads they are used to prepare the base course to create a wide flat surface for the asphalt to be placed on. Motor graders are also used to set native soil foundation pads to finish grade prior to the construction of large buildings. Motor graders can produce inclined surfaces, to give cant (camber) to roads. In some countries they are used to produce drainage ditches with shallow V-shaped cross-sections on either side of highways.

Global Motor Grader key players include XCMG, Kamstrup, VOLVO, etc. Global top three manufacturers hold a share over 35%.

South America is the largest market, with a share about 25%, followed by China, and North America, both have a share over 25 percent.

In terms of product, Medium size is the largest segment, with a share over 45%. And in terms of application, the largest application is Construction, followed by Soil and gravel

road maintenance, Snow removing, etc.
