Motor power cable assembly is a specialized cable assembly used for transmitting electrical energy between motors and power sources or drive systems. It mainly undertakes the function of high current power transmission and has high current carrying capacity, high temperature resistance, mechanical tensile resistance, and electromagnetic interference resistance. It is widely used in industrial motors, servo systems, electric vehicle drive systems, rail transit, and heavy machinery equipment. It is a key connecting component in electric drive systems. In 2025, the global sales volume is about 490000 kilometers, with an average unit price of about 9.3 US dollars per meter. The production capacity utilization rate is about 83%, and the gross profit margin is about 25%. Its upstream mainly includes high-purity copper and aluminum material suppliers, insulation material and sheath material manufacturers, shielding material and cable accessory enterprises. The midstream is power cable manufacturers and wire harness processing enterprises, and the downstream is power cable manufacturers and wire harness processing enterprises. Mainly focused on industrial motor manufacturers Servo system manufacturers, electric vehicle companies, rail transit equipment companies, and heavy machinery manufacturing enterprises, with conductor materials accounting for about 55% of the product cost structure, insulation and sheath materials accounting for about 20%, shielding and structural materials accounting for about 10%, processing and manufacturing and labor accounting for about 10%, testing and transportation accounting for about 5%, and others. In terms of demand, downstream demand lists include industrial motor power supply connections, electric vehicle drive system power transmission, rail transit traction system wiring,

industrial equipment power connections, and heavy machinery power supply. Downstream customer lists include motor manufacturing enterprises, electric vehicle manufacturers, rail transit equipment companies, industrial equipment manufacturers, and energy equipment enterprises. In terms of business opportunities, policy drivers come from the development of new energy transportation and industrial energy conservation and emission reduction policies to promote electrification upgrades. Technological innovation drivers come from the application of high conductivity materials. The development of high temperature resistant insulation technology and lightweight cable structures has improved performance, and changes in consumer demands are reflected in the increased demand for higher safety, longer lifespan, and higher power density transmission capacity, thereby promoting the development of motor power cable components towards high efficiency, high reliability, and lightweight direction.

The motor power cable component industry is currently in a stable growth stage driven by global electrification and industrial automation. Its demand growth mainly comes from the expansion of the electric vehicle industry, the upgrading of industrial motors, and the acceleration of the electrification process of rail transit and heavy equipment. Against the backdrop of the rapid development of the new energy industry, the demand for high current carrying and high safety cables in high-power motor systems continues to increase, making these products the basic key components of power drive systems. At the same time, as industrial equipment develops towards high power density and high efficiency, higher requirements are put forward for cables in terms of heat dissipation capacity, insulation performance, and durability. At the technical level, the application of high conductivity copper materials, high temperature resistant insulation materials, and composite shielding structures continue to mature, continuously optimizing product performance. In terms of application structure, Up, The fields of new energy vehicles and industrial motors have become the main growth drivers, driving the development of products towards high specifications and customization. From the perspective of competition, the industry is dominated by large industrial cable enterprises and professional power cable manufacturers. However, with the deepening integration of new energy and intelligent manufacturing, system level solution capabilities have become the core competitive element. In the future, with the global energy structure transformation and the increasing penetration rate of electrification, motor power cable components will continue to maintain steady growth and evolve towards high performance, lightweight, and system integration.
