The global Motor Sailplanes market size is predicted to grow from US\$ 440 million in 2025 to US\$ 758 million in 2032; it is expected to grow at a CAGR of 8.3% from 2026 to 2032.

A Motor Sailplane is a high-performance aircraft designed primarily for soaring, equipped with an integrated propulsion system—typically a retractable engine and propeller—that allows it to take off and climb to soaring altitude without the need for a tow plane or winch. Unlike Touring Motor Gliders (TMG), which resemble traditional airplanes, a motor sailplane maintains the extremely long, slender wings and aerodynamic purity of a pure racing sailplane. Once the desired altitude is reached, the engine is shut down and retracted into the fuselage, allowing the pilot to pursue long-distance cross-country flights using only thermal or ridge lift. In the event of losing lift, the engine can be 're-started' in flight (often called a 'sustainer' or 'turbo' configuration) to avoid an off-field landing.

In 2025, global Small Electric Glider production reached approximately 3000 units, and average price was 150000 usd/unit.

United States market for Motor Sailplanes is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Motor Sailplanes is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Motor Sailplanes is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
