A motor starting film capacitor is an electronic component used for starting electric motors. It is a specially designed capacitor, usually composed of a thin film dielectric and two electrodes, used to provide additional starting current when the motor is started. The function of the motor starting film capacitor is to generate a phase difference when the motor starts to generate a rotating magnetic field and help the motor start. This type of capacitor is usually designed with a higher capacitance value and higher voltage withstand capability to ensure sufficient current and stability during startup. Motor starting film capacitors are commonly used in the starting circuits of single-phase motors and some three-phase motors.
