The global Motorcycle Anti-Fall Bar market size is predicted to grow from US\$ 146 million in 2025 to US\$ 222 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

A Motorcycle Anti-Fall Bar, also known as a crash bar or engine guard, is a protective structure typically made of high-strength steel or aluminum alloy mounted on the frame of a motorcycle. Its primary function is to protect critical components—such as the engine, fuel tank, and body panels—from damage during a fall, slide, or low-speed crash. The bar helps distribute impact force and prevent the motorcycle from tipping completely, reducing repair costs and enhancing rider safety. In 2024, global Motorcycle Anti-Fall Bar production reached approximately 712.5 k units, with an average global market price of around US\$ 200 per unit.

With the improvement of people's living standards, more and more people choose motorcycles as a means of transportation or a way of leisure and entertainment. At the same time, since motorcycles are prone to accidents on the road, the demand for motorcycle anti-fall bars is also increasing. Therefore, the market prospect of motorcycle anti-fall bars is relatively broad.
