## Abstracts

The global Motorcycle Bias Tubeless Tire market size is predicted to grow from US\$ 3113 million in 2025 to US\$ 4297 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

A Bias tyre is made of layers of rubber-coated, plies of fabric (commonly nylon) placed at angles of approximately 30-40 degrees, with successive plies laid at opposing angles forming a crisscross pattern to which the tread is applied.

The motorcycle bias tubeless tire market refers to the sector involved in the production, distribution, and installation of bias-ply tires specifically designed for motorcycles that can be used without an inner tube. Bias-ply tires are constructed with layers of fabric cords that crisscross at angles to provide strength and durability. Tubeless tires, on the other hand, do not require an inner tube to contain the air pressure.

Bias-ply tires are built with layers of fabric cords that are arranged at an angle, typically between 30 to 45 degrees, from the tire's centerline. This construction gives the tire strength and flexibility. Tubeless technology eliminates the need for an inner tube by incorporating an airtight seal between the tire and the wheel, preventing air leakage.
