The global Motorcycle Chain and Cable Locks market size is predicted to grow from US$ 233 million in 2025 to US$ 321 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

In 2024, global Motorcycle Chain and Cable Locks production reached approximately 5062.8 K units, with an average global market price of around US$ 44.6 per unit.

Motorcycle chain and cable locks are specialized security devices designed to protect motorcycles from theft by physically securing them to immovable objects or immobilizing key components such as wheels. A chain lock typically consists of hardened steel links that are resistant to cutting, sawing, or leverage attacks, and it is paired with a high-security padlock or integrated locking mechanism. Cable locks, while usually lighter and more flexible, are constructed from braided steel cables coated in protective materials to prevent scratching, offering ease of portability and quick application. Both types of locks are often covered with protective sleeves to reduce wear on the motorcycle's surfaces. Their primary function is to deter opportunistic and professional thieves by providing a strong physical barrier that requires time, tools, and effort to overcome. Motorcycle riders frequently use chain and cable locks in combination with disc locks or alarm systems for layered security, making them an essential part of modern motorcycle anti-theft solutions, especially in urban environments where theft risk is higher.

The supply chain of Motorcycle Chain and Cable Locks includes upstream suppliers of steel, alloys, cables, lock cylinders, and coatings, midstream manufacturers that design, forge, assemble, and test the locks, and downstream distributors, retailers, and motorcycle owners who purchase them for vehicle security.
