Abstracts

The global Motorcycle Suspension Aftermarket market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The aftermarket for motorcycle electronic suspension kits has seen significant growth as riders increasingly seek to enhance the performance, comfort, and adaptability of their motorcycles. Repair shops and end consumers are key players in this ecosystem, both in terms of selling and upgrading suspension systems and providing replacement services.

Today the majority of new cars in the luxury and upper middle class range, including some Sport Utility Vehicles (SUVs) , have air suspension. The volume of the air in the air cushions in all corners of the car can be controlled. This is done by controlling the flow of the air in and out of the additional air reservoirs. The system includes a special air compressor, one or two air reservoirs, four shock absorber units with air springs and traditional shock absorbers, 2 to 5 stand-alone accelerometers and the electronic control unit (ECU) .
