The global Motorcycle Tire Pressure Management System (MTPMS) market size is predicted to grow from US\$ 219 million in 2025 to US\$ 516 million in 2032; it is expected to grow at a CAGR of 12.4% from 2026 to 2032.

Motorcycle Tire Pressure Management System (MTPMS) is an electronic safety system designed to continuously monitor the air pressure (and often temperature) of motorcycle tires and alert the rider when values deviate from the recommended range. A typical MTPMS uses compact, wheel-mounted sensors?either installed inside the tire (internal type) or attached to the valve stem (external type)?to directly measure tire pressure and transmit data wirelessly to a handlebar-mounted display, the motorcycle?s instrument cluster, or a smartphone application. When tire pressure becomes too low, too high, or tire temperature rises abnormally, the system issues visual and/or audible warnings so that the rider can take timely corrective action.

By providing real-time tire status information, MTPMS helps reduce the risk of accidents caused by underinflation, slow leaks, or overheating, while also improving handling stability, braking performance, tire life, and fuel efficiency. In the motorcycle field, MTPMS is mainly implemented as a direct tire pressure monitoring system, and can be supplied as original equipment on mid- to high-end models or as an aftermarket accessory kit for existing motorcycles.

In 2025, global Motorcycle Tire Pressure Management System (TPMS) sales reached approximately 7,613 k units, with an average global market price of around US\$ 29.4 per unit. The single-line production capacity is about 100 k units, and the industry gross profit margin is about 29%.

Motorcycle Tire Pressure Management System (TPMS) is moving from a niche accessory to a mainstream safety-electronics feature worldwide. Global market revenue is already approaching US\$200 million and is forecast to grow at low-to-mid-teens rates through 2031, driven by higher safety awareness, the rapid expansion of commuter motorcycles and scooters in emerging markets, and the rollout of factory-fit TPMS on premium models from major OEMs. Today the market is still dominated by external, valve-cap systems in the aftermarket, but the fastest growth comes from internal, OE-grade sensors integrated with the ECU and instrument cluster. Asia (especially China, India and ASEAN) will remain the volume engine, while Europe and North America anchor the high-value, high-spec segment. Over the medium term, technology upgrades (BLE connectivity, app integration, internal sensors) and regulatory pressure for tire-safety features are expected to support continued expansion and gradual consolidation among suppliers.
