A mounted pipe clamp is a pipe support device used to secure and support horizontal pipes to the floor. Also known as a level band, it allows for height adjustment (leveling) of the piping to ensure proper alignment and prevent damage under load. The clamp encircles the pipe, providing support and protection from misalignment or overloading, and enables height adjustments for sloping.

Mounted pipe clamps are primarily used for securing and supporting horizontal pipes on the floor. They are particularly useful for underfloor drainage pipes that require a slope for effective drainage. These clamps can also be used for water and gas pipes installed under the floor. While similar clamps can be used for vertical piping or ceiling-fixed horizontal piping, some products may have restrictions on wall fixing or suspended pipe support.

The global Mounted Pipe Clamp market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
