The global Moving Column Gantry Machining Center market size is predicted to grow from US\$ 204 million in 2025 to US\$ 356 million in 2032; it is expected to grow at a CAGR of 8.4% from 2026 to 2032.

The moving column gantry machining center is a high-precision CNC machine tool used for heavy and large workpiece processing. The design of this type of machining center allows the worktable to be fixed, while the gantry frame moves along the bed direction to achieve multi-sided processing of the workpiece by the machining head. The advantage of this structure is that it can process very large and heavy workpieces while maintaining high precision and rigidity.

The core demand for moving column gantry machining center is concentrated in the field of ultra-long and ultra-heavy workpiece processing, such as rail transit, wind power (80-meter blade mold manufacturing) and shipbuilding industry (propeller blade processing). The Chinese market accounts for more than 60% due to the promotion of the "new infrastructure" policy (such as high-speed rail and offshore wind power projects). Local companies Jinan No. 2 Machine Tool and Nantong Technology have seized the market through large-stroke (X-axis>20 meters) and high-load (worktable load of more than 50 tons) models. The price is 50% lower than that of imports, but the core components (linear guides, CNC systems) are still dependent on imports. Future growth points focus on new energy fields (hydrogen energy storage tank welding groove processing, photovoltaic bracket mass production) and intelligent upgrades (remote operation and maintenance system penetration rate increased to 40%), but high customization costs (non-standard design accounts for 70%) and technical barriers (ultra-long stroke accuracy remains $\pm 0.02\text{mm/m}$) are still expansion bottlenecks.
