The global Mowing and Crimping Machine market size is predicted to grow from US\$ 1663 million in 2025 to US\$ 2530 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

In 2025, global A mowing and crimping machine production reached approximately 160,000 units. A mowing and crimping machine is an agricultural equipment used for grassland and pasture operations. It performs a single-pass treatment of forage by combining cutting and crimping processes. While completing mowing, the machine mechanically crimps the grass stems, damaging the plant tissue structure, thereby accelerating moisture evaporation, promoting faster forage drying, and improving subsequent collection and utilization efficiency. Mowing and crimping machines are typically used in pastures, grasslands, and some agricultural planting areas. In forage harvesting and hay production, they help improve operational efficiency, reduce labor costs, and enhance forage quality.

The mowing and crimping machine market has gradually developed in recent years, driven by the improvement of agricultural mechanization, the expansion of large-scale pasture operations, and the growing demand for refined grassland resource management. This type of equipment is mainly used for mowing and crimping operations in grasslands, pastures, and some marginal lands. It performs cutting and stem crimping in a single pass, accelerating forage drying and improving subsequent utilization efficiency. Within agricultural production systems, its application helps improve forage harvesting efficiency, reduce labor costs, and enhance forage quality. At the same time, as modern animal husbandry continues to move toward intensification and higher efficiency, demand for integrated and multifunctional grassland operation equipment is increasing, further promoting the wider application of mowing and crimping

machines across various working scenarios. In the future, the market is expected to continue evolving toward higher efficiency, energy-saving designs, structural optimization, and intelligent control systems to meet the comprehensive requirements of modern agricultural production for both efficiency and quality.
