The global MPO Connectors market size is predicted to grow from US\$ 921 million in 2025 to US\$ 1521 million in 2031; it is expected to grow at a CAGR of 8.7% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Multi-fiber push on connectors, or MPOs for short, are fiber connectors comprised of multiple optical fibers. While defined as an array connector having more than 2 fibers, MPO Connectors are typically available with 8, 12 or 24 fibers for common data center and LAN applications. Other fiber counts are available such as 32, 48, 60 or even 72 fibers, but these are typically used for specialty super high-density multi-fiber arrays in large scale optical switches.

High-Density Fiber Optic Connectivity: The demand for high-density fiber optic connectivity in data centers, telecommunications, and other applications drives the adoption of MPO connectors. These connectors allow multiple fibers to be terminated in a single compact connector, optimizing space.

Data Center Growth and Expansion: As data centers grow and expand to meet the increasing demand for cloud services, storage, and data processing, there is a corresponding need for high-performance and space-efficient fiber optic connectivity, which MPO connectors provide.

Deployment of 5G Networks: The deployment of 5G networks and the associated increase in network capacity drive the demand for high-bandwidth and reliable optical connectivity. MPO connectors support the high data rates and connectivity requirements

of 5G networks.
