MPO loopback module, also known as MPO/MTP® looper or loopback optical module, is a device used for signal return in test systems or network systems.

The MPO loopback module contains an MPO loopback jumper, which threads both ends of the optical fiber into an MTP/MPO connector, allowing the optical path to return to itself within the same connector without changing the signal or repeating the signal. In this way, the actual path of a signal through the network can be simulated, allowing detection of potential problems in the link.

The global MPO Loopback Module market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
