MPPT photovoltaic controller is a maximum power point tracking solar controller that can detect the power generation voltage of the solar panel in real time and track the maximum voltage and current value (VI), so that the system can charge the battery with maximum power output, coordinate the work of solar panels, batteries, and loads, and is the brain of the photovoltaic system. The MPPT photovoltaic controller calculates the output power of the solar array by detecting the DC voltage and output current of the main circuit, and realizes the tracking of the maximum power point, which improves the charging efficiency and has intelligent management functions. It is used in solar photovoltaic systems, including life and industrial electricity in remote areas, power supply in tourist areas, and can also be used for small photovoltaic systems such as solar street lights and solar monitoring.
