MRI is diagnostic equipment that uses a magnetic field and radio waves to create detailed images of the organs and tissues within your body.

MRI gives different information about structures in the body that can be seen with an X-ray, ultrasound, or computed tomography (CT) scan.

MRI can make cross-sectional, sagittal, and coronal layer images of various ramps. MRI is used to detect brain hematoma, cerebral hematoma, brain tumors, intracranial aneurysms, arteriovenous malformations, cerebral ischemia, spinal tumors, spinal cord syringomyelia and hydrocephalus and other common brain diseases. Due to MRI has many applications, Neuro Imaging is only one of those applications. So in this report we
