MR shock absorber, also called magnetorheological shock absorber, is a device that uses the magnetorheological effect to achieve vibration reduction control. It consists of components such as magnetorheological fluid, solenoid coils and adjustable valves. Its working principle is to use a magnetic field to adjust the viscosity of the magnetorheological fluid, thereby changing the damping characteristics of the shock absorber to achieve effective control of vibration and impact. Magnetorheological shock absorbers are usually used in vehicle suspension systems, building structures, bridges and construction machinery, etc. to improve the stability, comfort and safety of the system.
