## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

mRNA is a rather versatile technology and offers a number of advantages. mRNA lacks genomic integration and its use results in transient expression of the encoded protein. This favorable safety profile makes mRNA especially attractive for vaccines and gene editing. mRNA is well defined chemically which ensures reproducible manufacturing at high yield, purity and activity. Improvements of lipid nanoparticle formulations as a vehicle for in vivo systemic delivery of mRNA has greatly favored the development of in vivo transfection strategies.

Over the next five years, LPI(LP Information) projects that mRNA Cancer Vaccines and Therapeutics will register a 20.5% CAGR in terms of revenue, reach US\$ 210 million by 2023, from US\$ 68 million in 2017.
