MS Sealant for prefabricated buildings is a high-performance elastic sealing material based on modified silane polymer (MS Polymer). It combines the advantages of polyurethane and silicone sealants, offering excellent adhesion, weather resistance, and environmental safety. During curing, it releases no isocyanates or low-molecular substances, ensuring low VOC emissions and eco-friendly application. The sealant is widely used for joint sealing and structural bonding in prefabricated buildings, suitable for substrates such as concrete, metal, and glass. It provides long-term durability, waterproofing, and seismic resistance, meeting the requirements of modern prefabricated construction.

The upstream raw materials include modified silane polymers (MS polymers), plasticizers, fillers (calcium carbonate, silica), additives (catalysts, tackifiers, rheological agents), and packaging materials. Downstream applications include structural joints, waterproofing, curtain wall installation, panel splicing, and decorative bonding in prefabricated buildings.
