## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Multi Axis Arthroscopy market for 2018-2023.

Arthroscopy (also called arthroscopic or keyhole surgery) is a minimally invasive surgical procedure on a joint in which an examination and sometimes treatment of damage is performed using an arthroscope, an endoscope that is inserted into the joint through a small incision.

The increasing prevalence of musculoskeletal disorders coupled with growing demand for minimally invasive surgeries is estimated to propel future growth. For example, Ceterix launched minimally invasive suture passer known as NovoStitch. The device can be used even for complicated anatomical positions to ensure joint stitch.

Visualization systems are used to identify the injury at the joint site. With technological innovations at the forefront, the images can be displayed in 3D format. Furthermore, the rise in the use of fluid management systems to optimize the visualization process will spur the demand.

Over the next five years, LPI(LP Information) projects that Multi Axis Arthroscopy will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
