A Multi-cabin Hyperbaric Oxygen Chamber is a medical device designed to provide hyperbaric oxygen therapy (HBOT) to multiple patients simultaneously. Unlike a single chamber, this type of chamber has multiple compartments or cabins, each capable of accommodating one or more patients. The chamber is pressurized with 100% oxygen or ambient air, allowing patients to breathe oxygen through masks, hoods, or endotracheal tubes at higher-than-normal atmospheric pressures. The multi-cabin design enables the treatment of several individuals at once, making it efficient for treating groups or for medical facilities with high patient volumes. This type of chamber is commonly used in hospitals, specialized clinics, and for treating conditions such as decompression sickness, severe infections, and chronic wounds.

United States market for Multi-cabin Hyperbaric Oxygen Chamber is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
