The global Multi-channel ABS market size is predicted to grow from US$ 19930 million in 2025 to US$ 28790 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

In 2024, the global production of multi-channel ABS will reach 35.18 million sets, with an average selling price of US$350 per set.Multi-channel ABS is an active safety system that uses multiple independent control channels to monitor and adjust the braking force on different wheels in real time during braking. It consists of wheel speed sensors, an electronic control unit (ECU), solenoid valves or hydraulic regulators. By detecting differences in wheel speed, it determines whether there is a tendency for locking and independently applies or releases braking force to the corresponding wheels, thereby preventing wheel lock and slip. Compared to single- or two-channel ABS, multi-channel systems typically include three, four, or even six or more channels, enabling more precise braking control for each wheel or axle, significantly improving vehicle braking stability, handling, and safety. Widely used in passenger cars, buses, heavy trucks, and trailers, this system is a key component of modern vehicle chassis active safety and can work in conjunction with systems such as Electronic Stability Control (ESC) and Electronic Brakeforce Distribution (EBD) to further enhance vehicle safety.

The core component of multi-channel ABS is the ABS master control ECU, which is primarily manufactured and supplied by leading global brake system suppliers such as Bosch, Continental, ZF, and Hitachi. Its downstream applications primarily include vehicle manufacturing and are widely adopted by major international automakers such as Toyota, Volkswagen, Ford, General Motors, Volvo, and Daimler to enhance vehicle braking stability and active safety performance.

United States market for Multi-channel ABS is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
